## INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

International application No.

PCT/DE2004/000315

## Box No. I Basis of the report

1. With regard to the language, this report is based on the international application in the language in which it was filed, unless otherwise indicated under this item.

- This report is based on translations from the original language into the following language \_\_\_\_\_, which is the language of a translation furnished for the purposes of:
- international search (Rule 12.3 and 23.1(b))
  - publication of the international application (Rule 12.4)
  - international preliminary examination (Rule 55.2 and/or 55.3)

2. With regard to the elements of the international application, this report is based on (*replacement sheets which have been furnished to the receiving Office in response to an invitation under Article 14 are referred to in this report as "originally filed" and are not annexed to this report*):

- the international application as originally filed/furnished  
 the description:

pages 1-15 as originally filed/furnished

pages\* \_\_\_\_\_ received by this Authority on \_\_\_\_\_

pages\* \_\_\_\_\_ received by this Authority on \_\_\_\_\_

- the claims:

nos. \_\_\_\_\_ as originally filed/furnished

nos.\* \_\_\_\_\_ as amended (together with any statement) under Article 19  
21.01.2005 with the

nos.\* 1 received by this Authority on letter of 21.01.2005

nos.\* \_\_\_\_\_ received by this Authority on \_\_\_\_\_

- the drawings:

sheets 1/5-5/5 as originally filed/furnished

sheets\* \_\_\_\_\_ received by this Authority on \_\_\_\_\_

sheets\* \_\_\_\_\_ received by this Authority on \_\_\_\_\_

- a sequence listing and/or any related table(s) – see Supplemental Box Relating to Sequence Listing.

3.  The amendments have resulted in the cancellation of:

- the description, pages \_\_\_\_\_
- the claims, nos. 2-17 \_\_\_\_\_
- the drawings, sheets/figs \_\_\_\_\_
- the sequence listing (*specify*): \_\_\_\_\_
- any table(s) related to sequence listing (*specify*): \_\_\_\_\_

4.  This report has been established as if (some of) the amendments annexed to this report and listed below had not been made, since they have been considered to go beyond the disclosure as filed, as indicated in the Supplemental Box (Rule 70.2(c)).

- the description, pages \_\_\_\_\_
- the claims, nos. 1 \_\_\_\_\_
- the drawings, sheets/figs \_\_\_\_\_
- the sequence listing (*specify*): \_\_\_\_\_
- any table(s) related to sequence listing (*specify*): \_\_\_\_\_

\* If item 4 applies, some or all of those sheets may be marked "superseded."

## INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

International application No.

PCT/DE2004/000315

**Box No. III Non-establishment of opinion with regard to novelty, inventive step and industrial applicability**

The questions whether the claimed invention appears to be novel, to involve an inventive step (to be non obvious), or to be industrially applicable have not been examined in respect of:

 the entire international application claims Nos. 1

because:

 the said international application, or the said claims Nos. relate to the following subject matter which does not require an international preliminary examination (*specify*): the description, claims or drawings (*indicate particular elements below*) or said claims Nos. are so unclear that no meaningful opinion could be formed (*specify*): the claims, or said claims Nos. 1 are so inadequately supported by the description that no meaningful opinion could be formed. no international search report has been established for said claims Nos. the nucleotide and/or amino acid sequence listing does not comply with the standard provided for in Annex C of the Administrative Instructions in that:

the written form

- 
- has not been furnished
- 
- 
- does not comply with the standard

the computer readable form

- 
- has not been furnished
- 
- 
- does not comply with the standard

 the tables related to the nucleotide and/or amino acid sequence listing, if in computer readable form only, do not comply with the technical requirements provided for in Annex C-bis of the Administrative Instructions. See Supplemental Box for further details.

	Claims _____	NO
Inventive step (IS)	Claims _____	YES
	Claims _____	NO
Industrial applicability (IA)	Claims _____	YES
	Claims _____	NO

## 2. Citations and explanations (Rule 70.7)

1. This report refers to the following search report citations; the same numbering will be used throughout the proceedings:

D1: US 2001/021593 A1 (TAKAMATSU YUKICHI ET AL) 13 September 2001 (2001-09-13)

D2: EP-A-1 207 215 (NGK INSULATORS LTD) 22 May 2002 (2002-05-22)

D3: US-A-5 494 521 (MATSUI YASUSHI ET AL) 27 February 1996 (1996-02-27)

D4: EP-A-1 108 468 (IPS LTD) 20 June 2001 (2001-06-20)

D5: DE 101 18 130 A (AIXTRON AG) 17 October 2002 (2002-10-17)

## 2. Prior art

2.1 D1 indicates a CVD system and a CVD method for depositing semiconductor films (abstract). The design (figure 1) is similar to that of figure 1 of the present application. The gas inlet system 5 has a first passage 10 and a second passage 11 [0033]. To deposit GaN (example 1, [0059-0065]) on a sapphire substrate, a

Box No. V

Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

mixture of NH<sub>3</sub> and H<sub>2</sub> is introduced through the first passage and a mixture of trimethylgallium and H<sub>2</sub> through the second passage. Thus, a gas flow is obtained in which the trimethylgallium / H<sub>2</sub> mixture is situated between the NH<sub>3</sub>/H<sub>2</sub> mixture.

Furthermore, D1 already deals with the problem addressed by the present application, namely that of preventing the deposition of material on the chamber walls of the CVD reactor [0009]. It is stated that it belongs to the prior art to use a non-reactive protective gas about the reactive gases [0010] and a gas inlet 8 is provided therefor in the system shown in figure 1.

2.2 D2 describes a method for producing a III-V semiconductor film (abstract). In the reactor shown in figure 2, to deposit an AlN film on a substrate, e.g. sapphire [0028], a mixture of trimethyl aluminium and H<sub>2</sub> is fed through the passage 18, NH<sub>3</sub> is fed through the passage 19, and H<sub>2</sub> or N<sub>2</sub> are fed through the uppermost passage in figure 2. This ensures that the precursor gases are supplied efficiently to the substrate and not areas distant therefrom [0024]. The design of the device as per figure 2 is virtually identical to that of figure 1 of the present application. In D2 too, a gas mixture is obtained that is layered such that the organometallic compound is situated between the substrate and the group V or group VI compound. Since a certain mixing of the gases will occur at least at the border layer between the NH<sub>3</sub> and the H<sub>2</sub> or N<sub>2</sub> layer, there is also a layer comprising a group V or group VI compound with a support gas.

D2 also addresses the problem of particle formation

Box No. V	Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement
-----------	---

[0007-0010] and to this end envisages the deposition of an AlGaInN on the substrate holder [0014].

2.3 D3 discloses an MOCVD system for the deposition of III-V semiconductor films, in which organometallic precursors can be removed from various sources and fed into the chamber via gas lines (abstract and figure 1). Each gas line, e.g. line 87, is connected to a valve 4 and a valve 5 which allow the respective precursor to be fed to two different gas inlets in the chamber. The number 10 in figure 1 characterises a mass flow meter (column 6, lines 31-41).

2.4 D4 also indicates a CVD system for depositing compound semiconductors (abstract and [0002]) in which gases can be fed from supply containers 416, 426 via gas lines and a plurality of valves to two inlets of a reactor chamber 100 (figure 1).

2.5 Compound semiconductors, such as, e.g., GaN, GaAlN or GaInN, are likewise deposited in D5 [0020, 0035]. The process starts with the metal halogenides which are introduced together with H<sub>2</sub> as a support gas between the substrate and a gas layer from an elementary hydrogen of the V main group [0020, 1, 2, 4-7].

### 3. Novelty (PCT Article 33(2))

The device shown in figure 5 is novel, since D1, D2 and D5 do not mention the use of valves.  
It is novel over D3 and D4, since the devices shown in

**Box No. V** Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

these documents do not have a divider plate.

If claim 1 were to be amended in accordance with the comments made Box 1, it would therefore be considered novel.

#### 4. Inventive step (PCT Article 33(3))

D1 and D2 describe reactors for depositing compound semiconductors, e.g. III-V- semiconductors, in which the reactants are separated in the reaction chamber by a divider plate. However, these documents do not give any details as to the structures of the system which are required to prepare the reaction gases, supply them to the reactor and control the flow thereof.

It is general knowledge in the art that gas supply containers with support gas and reaction gas are used and the gases are controlled using valves. In D3, a system such as this is used for preparing and handling reaction gases and is employed in the deposition of III-V semiconductors.

A person skilled in the art addressing the problem of which system to use to prepare and handle reaction gases so as to carry out the method indicated in D1 and D2 would consider the system of D3, since it relates to the same type of deposition material as D1 and D2 and offers, in addition, the advantages indicated in the abstract. The combination of D1 or D2 with D3 leads to a device with two gas collection lines, a divider plate in the reactor, and two valves via which a gas source can be connected to either gas collection line.

The device according to figure 5 of the present application is, in principle, similar to the device that

Box No. V

**Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement**

can be derived from a combination of D1 or D2 with D3. However, it differs from the latter in the use of 3/2 way valves.

In the device suggested by a combination of D1 or D2 with D3, the problem arises that there can be a significant mixing of the reaction gases already in the lines, namely if valves simultaneously connect the different gas sources to a collection line, e.g., if, during a gas exchange process or by mistake, these valves are opened at the same time. This mixing of gases can lead to the formation of particles, which is, as is well known, a highly undesirable phenomenon.

This problem is solved as per the device of figure 5 of the present application by the use of 3/2 way valves, since in these valves, always either one or the other gas collection line is connected to a gas source.

Since none of documents D1-D5 mentions 3/2 way valves, nor suggests the use thereof, if claim 1 were to be amended in accordance with the comments made in Box I, it would be considered inventive.

## 5. Industrial applicability

If claim 1 were to be amended in accordance with the comments made in Box I, it would meet the requirements of industrial applicability (PCT Article 33(4)), since the technical subject matter of the present application can be made or used in industry, in a technical sense.

**INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY**

International application No.

PCT/DE2004/000315

**Box No. VII      Certain defects in the international application**

The following defects in the form or contents of the international application have been noted:

The present application does not meet the requirements of PCT Rule 5.1(a)(ii) since it does not indicate the relevant prior art, e.g. D1 and D2, or briefly discuss the essential content disclosed therein.

**Box No. VIII      Certain observations on the international application**

The following observations on the clarity of the claims, description, and drawings or on the question whether the claims are fully supported by the description, are made:

**Clarity (PCT Article 6)**

1. Independent claim 1 is insufficiently supported by the description since the latter does not identify in its introductory part the subject matter of this claim and its technical effects as the invention.
2. Figures 1 and 4a belong to the prior art, but are not characterised as such.

**Supplemental Box**

In case the space in any of the preceding boxes is not sufficient.

Continuation of:

**Box I, III****Box I:**

Claim 1 does not meet the requirements of PCT Article 34(2) (b) since its content goes beyond the original disclosure, for the following reasons.

a) Claim 1 cannot be deemed a combination of the original sole device claims 15 and 16 since claim 1 contains additional technical elements (e.g. "3/2 way valve", "divider plate").

b) However, claim 1 is considered a generalisation with respect to pages 11 and 12 of the description and the system shown in figure 5. Thus, claim 1 does not contain, for example, the fact that a process gas is introduced into one side of the compartment and the other process gas on the other side. Similarly, the technical element that the gases can be interchanged is missing. Nor is it stated that the gas inlets are connected via the valves to the supply containers. And finally, figure 5 shows a device and pages 11 and 12 describe same which has exactly two and not at least two gas inlets.

The following examination therefore relates to the system whose manner of functioning is shown in figure 5 and described on pages 11 and 12 (see also PCT Rule 70.2(c)).

**Box III:**

Claim 1 goes beyond the version of the application as filed (see comments pertaining to Box I above) and is

**INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY**

International application No.

PCT/DE2004/000315

**Supplemental Box**

therefore not supported by the text of the description  
and the drawings.
